

**Objective:**

1. To create a Generic class / method / constructor.
  2. To use the Generic class in class hierarchy.
- 

1. Implement a stack using Generics and perform the operations: Push, Pop, IsEmpty(), IsFull(), clear.
2. Using Generic method, sort the various types of elements. Bound the type parameter.

Design a class called Stack as described below:

Stack< >
+Stack<> +push() +pop() +isEmpty() +isFull()
